

Locally owned by experts with over 35 yrs experience.

Winter is the perfect time for filter maintenance. Filtration accounts for 80% of your water clarity and a healthy filter will ensure your pool water remains clear. Filter cleaner and degreaser comes in a handy 250gram sachet. Soak your cartridge, preferably overnight, then hose off. You will be amazed at how much extra dirt and grease is removed.

For sand or glass filters, remove the valve and pour it into the sand or glass, replace the valve and leave overnight. In the morning, backwash and then rinse. Alternatively remove the pump lid and pour it in, replacing the lid and run the pump for a few seconds then switch off.

Pool and Home

Calcified cell

DOES THIS HAPPEN TO YOUR CHLORINATOR CELL?

Calcium build-up on the cell is a common problem with salt water pools but it is preventable. Excess calcium build-up shortens the life of your cell as you need to clean the cell more often than necessary.

By adding **AQUASHIELD 3** to the pool water the calcium remains soluble in the water instead of solidifying on the cell when electrolysis takes place.

1: Cell Protector – It keeps build up on salt chlorinator cells soft and helps reduce the likelihood that they will occur in the first place. If a hard build up occurs, it will decrease the production of chlorine gas and reduce the overall efficiency of your pool equipment.

2: Scale Control – Assists in removing existing scale/stopping the build up of scale from pool walls, equipment and pipes.

3: Metal Magnet – Keeps metal particles such as iron and copper from falling out of solution. These solutions can cause a variety of coloured, unsightly staining.

A **NORIA ECO pump** can save you up to \$800 per year on electricity costs. A single speed pool pump is responsible for 30% of your electricity cost. By switching to an energy saving variable speed pump you CAN save. Ask us to

do an energy audit on your pool. With our unique program we can predict exactly how much you would save by changing to our energy saving pump.

CAN YOU SMELL CHLORINE? Pool smell is due, not to chlorine, but to **chloramines**, chemical compounds that build up in **pool water**

.Chloramines result from the combination of two ingredients: (a) chlorine disinfectants and (b) perspiration, oils and urine that enter **pools** on the bodies of swimmers. When chloramines is present the eyes become irritated and the skin and lungs can also be irritated. When your **TOTAL CHLORINE** is higher than your **FREE CHLORINE** you need a dose of **CLEAN N SWIM** which is Potassium Monopersulphate. 500gm will dose 50,000 litres of water. This will eliminate the chloramines from your water
